A NOTE FROM THE DEVELOPERS

Welcome to ASTRO MINER, the latest in space mining simulation from Bradsonic Incorporation. This game represents the cutting edge of 3D space simulation technology, combining realistic physics, economic trading systems, and thrilling asteroid mining gameplay.

Set in the distant Oort Cloud, you'll pilot a mining lander through dangerous asteroid fields, extract valuable commodities, and build your mining empire across three distinct locations: the Depot at Shinjuku, the Station at Hirohito, and the Halo at Nagako.

Key Features

- Realistic 3D physics-based lander controls with dynamic gravity systems
- Comprehensive commodity trading economy across multiple locations
- Ship upgrade and customization systems
- Atmospheric bar system for networking and information gathering
- Procedurally generated asteroid environments — no two missions are alike

Thank you for choosing Bradsonic software. We hope you enjoy your journey into the Oort Cloud!

— The Bradsonic Development Team

SYSTEM REQUIREMENTS & INSTALLATION

System Requirements

- **System:** BRADSONIC 69000 or compatible hardware
- **Memory:** 64MB RAM minimum (128MB recommended)
- **Storage:** 2MB free disk space
- **Input:** Keyboard and mouse required
- **Audio:** RADLAND LAPC-1 Soundcard compatible (optional)

Installation Steps

1. Insert the ASTRO MINER installation media into your BRADSONIC 69000 system
2. Navigate to the installation directory and execute the installation program
3. Accept the license agreement (American License only)
4. Select installation directory and wait for completion
5. Launch the game executable and enjoy!

INTRODUCTION

ASTRO MINER is a 3D space mining simulation where you pilot a lander ship through the asteroid fields of the Oort Cloud. Mine valuable resources, trade them for credits, and upgrade your ship to tackle increasingly dangerous asteroids.

The Oort Cloud Setting

The Oort Cloud represents the farthest reaches of our solar system—a vast region of icy bodies and asteroids that serves as the frontier for space mining operations. The three mining locations represent different stages of development in this remote region, each offering progressively more valuable resources but also greater dangers.

Your Mission

- Mine asteroids for valuable commodities
- Manage fuel, hull integrity, and cargo capacity
- Trade commodities for credits at local markets
- Upgrade your ship to tackle more dangerous asteroids
- Progress through increasingly challenging locations

Starting Resources

When you begin a new game, you'll start at the Depot (Shinjuku) with: 1,000 Credits, 100 Fuel, 100 Hull integrity, 25 Cargo units, and Rank 1.

CONTROLS

3D Lander Environment

Ship Movement

- **Mouse Movement:** Controls pitch (up/down) and roll (left/right). Mouse automatically centers for optimal control.
- **Right Mouse Button:** Rotates ship yaw (spinning left/right). Click to reverse rotation direction.
- **Left Mouse / W / SPACE:** Thrust upward. Consumes fuel while active.

Mining

- **SPACE Key:** Fire laser (requires Laser upgrade). Overheats after 3 seconds of continuous fire with a 5-second cooldown.

Navigation

- **ESC:** Pause/unpause game
- **Return to Base:** Navigate to the red gravity reverse tunnel at the asteroid's center

Menu Navigation

- **UP/DOWN Arrows:** Navigate menu options
- **LEFT/RIGHT Arrows:** Navigate modal options
- **ENTER or SPACE:** Select/Confirm
- **A-F Keys:** Quick select asteroid on Prospects page

GAMEPLAY BASICS

The Mining Cycle

1. **Select Asteroid:** Choose from 6 asteroids (A-F) at your current location. Each has different Prosperity (resource yield) and Gravity (difficulty).
2. **Launch:** Pay fuel cost (20-50 credits) and launch. Ensure you have enough fuel for the return journey!
3. **Mine:** Use your laser to destroy rocks. Debris automatically converts to commodities based on asteroid prosperity.
4. **Return:** Navigate to the center red tunnel to beam back to base.
5. **Sell & Upgrade:** Visit the Market to sell resources, then the Shipyard to upgrade your ship.

Key Resources

Fuel

Required for all missions and consumed during thrust. **WARNING:** If fuel runs out, gravity increases 5× and you'll crash hard. Refuel at the Shipyard for 50 credits.

Hull

Your ship's health (0-100). Damaged by terrain collisions: 10 damage normally, 20 damage in high gravity (>50%). Running out of fuel means instant death on collision. Repair at Shipyard for 400 credits.

Cargo

Maximum capacity: 25 units (50 with upgrade). Each cargo unit reduces thrust power by 5% (minimum 65% thrust at max cargo). More cargo means more profit per trip, but harder control.

MINING LOCATIONS

Depot (Shinjuku) — Starting Location

The Depot at Shinjuku serves as the primary entry point for new miners entering the Oort Cloud. Established as a supply and refueling station, it offers basic equipment and lower-tier asteroids perfect for learning the trade.

- Asteroid Prosperity: 10% – 70%
- Asteroid Gravity: 25% – 88%
- Upgrades: Laser, Collector, Thruster Boost, Exo-Plating

Station (Hirohito) — Mid-Tier

The Station at Hirohito represents a more established mining operation, with better infrastructure and access to richer asteroid fields. Miners who have proven themselves at the Depot can access this location.

- Asteroid Prosperity: 35% – 95%
- Asteroid Gravity: 45% – 95%
- Upgrades: Fuel Tank Upgrade, Cargo Black Hole, Ship Colors

Halo (Nagako) — High-Tier

The Halo at Nagako is the pinnacle of Oort Cloud mining operations—a high-tech facility servicing the most dangerous and profitable asteroid fields. Only the most skilled and well-equipped miners can operate here.

- Asteroid Prosperity: 50% – 100%
- Asteroid Gravity: 55% – 98%
- Upgrades: Better Laser, Better Collector, Premium Ship Colors

COMMODITIES & TRADING

There are 11 commodity types in ASTRO MINER, ranging from common materials to extremely rare crystals. Higher prosperity asteroids yield rarer commodities more frequently.

Commodity Values

Common (Low Value)

Water Ice (5 cr), Lunar Regolith (10 cr), Hydrocarbons (15 cr)

Medium Value

Cryogenic Fluids (30 cr), Helium-4 Isotopes (50 cr), Hydrogen Isotopes (70 cr)

Rare (High Value)

Arcanite (120 cr), Pyrothite Geodes (180 cr), Chronite (250 cr), Xenon Crystals (400 cr), Plasmatic Diamonds (800 cr)

Trading Strategy

- **Sell common commodities first** to make room for better finds
- **Save rare commodities** for higher-tier locations where prices are better
- **Check prices at each location** — buy rates vary by market

SHIP UPGRADES

Essential Upgrades (Depot)

- **Laser (200 cr):** REQUIRED for mining. Without this, you cannot destroy rocks.
- **Collector (500 cr):** Auto-collects debris within 20 units. Highly recommended — manual collection is nearly impossible.
- **Thruster Boost (500 cr):** Increases thrust power by 20%. Essential for high-gravity asteroids.
- **Exo-Plating (1,000 cr):** Reduces hull damage by 20%.

Advanced Upgrades (Station)

- **Fuel Tank Upgrade (1,500 cr):** Increases max fuel capacity and reduces consumption by 50%.
- **Cargo Black Hole (2,000 cr):** Doubles cargo capacity (25 → 50 units).

Premium Upgrades (Halo)

- **Better Laser (300 cr):** Improved heat management for more efficient mining.
- **Better Collector (750 cr):** Improved range and collection speed.

Maintenance

- **Fuel (50 cr):** Refills fuel to maximum
- **Repairs (400 cr):** Restores hull to 100%

THE BAR

The bar is a social hub where you can network, gather information, and enjoy a drink. Each location has its own bar with unique features.

Bar Features

- **Drinks:** Astro Brew (5 cr), Premium drinks at Halo (15 cr), "Drinks Are On Me!" (1,000 cr) — unlocks Gold Card
- **Rumor Mill (Free):** Get tips about asteroids and hidden opportunities
- **Gambling:** Risk/reward mini-game — use with caution!
- **Scientist Encounter (Station):** Special encounters with valuable information

DRINKING PENALTY SYSTEM

Drink responsibly! Each bar visit has a random threshold (5-10 drinks). If you reach this threshold in one sitting, you'll get drunk.

The Penalty: When drunk, gravity increases 10-30% on ALL asteroids at your current location. This makes mining significantly harder. The effect persists until you launch into space.

Gold Card: Unlocked after purchasing 5 drinks in one session. Provides VIP access to special bar features.

TIPS & STRATEGIES

For Beginners

1. Start with Asteroid A (lowest gravity, lowest fuel cost)
2. Buy Laser first — you cannot mine without it!
3. Buy Collector second — manual collection is nearly impossible
4. Always keep enough fuel for the return journey
5. Sell regularly to fund upgrades — don't hoard commodities early

Mining Efficiency

- Fire laser in short bursts to avoid overheating
- Use short thrust bursts instead of continuous thrust to conserve fuel
- Balance cargo weight with maneuverability — sometimes multiple smaller runs beat one overloaded run
- High prosperity = better rewards, but usually higher gravity and fuel costs

Economic Strategy

- Progress through locations as you upgrade — higher-tier locations pay more
- Save rare commodities for higher-tier locations
- Fuel Tank Upgrade is essential for longer, more profitable runs

TECHNICAL NOTES

Copy-Protection System

ASTRO MINER includes advanced copy-protection technology to prevent unauthorized duplication. The game performs copy-protection checks during initialization through verification in game's code.

Ship Physics

- **Gravity:** Base -12.0 units, scales with asteroid gravity (25-95%), increases with cargo weight, affected by drunk penalty (10-30% increase)
- **Thrust:** Base 24.0 units, +20% with Thruster Boost, -5% per cargo unit (minimum 65%)
- **Collision Damage:** 10 damage (normal), 20 damage (high gravity >50%), instant death (out of fuel)

Environment Generation

Each asteroid launch generates a unique environment with procedurally generated terrain and random rock placement. No two missions are alike — even the same asteroid is different each time!

TROUBLESHOOTING

"I can't mine!"

Make sure you purchased the Laser upgrade from the Shipyard. Press SPACE to fire.

"I can't collect debris!"

You need the Collector upgrade. Debris must be within 20 units of your ship.

"My ship won't move!"

Check fuel level (empty fuel = $5\times$ gravity!), cargo weight (too much = reduced thrust), and ensure you're using Left Mouse/W/SPACE for thrust.

"I keep crashing!"

Try lower-gravity asteroids first. Consider buying Exo-Plating for damage reduction. Make sure you have enough fuel.

"Gravity seems too high!"

You might be drunk! The penalty increases gravity 10-30% on all asteroids. Launch to an asteroid to reset.

"I can't return to base!"

Navigate to the center of the asteroid (red tunnel). Your ship will automatically beam up when you enter.
